

Press release: DNA-Test for the detection of newly out broken influenza viruses (H5N8 and H5N6)

Duisburg 22.11.2016: Genekam Biotechnology AG has just developed two different kits for two different viruses, which are breaking in many countries out. H5N6 is infecting human beings also particularly a few cases are being reported in China and it may spread to our countries. H5N8 is breaking in birds at present out and less likely to infect human beings but it may change as these viruses are changing. Genekam is going to bring these new kits on the market as monitoring of these viruses is only the best choice.
